

Server Monitoring & Management

Novell® NetWare®

Sensor List

Cache Hits

Reports low file system cache hit rate.

Connection Load

Reports on low connection table space.

CPU Busy

Reports on CPUs under load.

Hotfix Disk Redirection

Reports hotfix disk redirection activity.

Logged In Users

Reports on low user login licenses.

Login Status

Monitors the login status of the server.

NCP Errors

Monitors for reported NCP errors.

NCP Request Load

Reports high NCP requests rate.

Netware General

General settings used by multiple sensors.

NLM Critical

Monitors when a critical NLM is not running.

Open Files

Reports on low open file entry space.

Queue Length

Monitors the queue lengths and creates a problem event if the value exceeds the threshold value.

Queue Wait Times

Monitors the time until jobs in the queue are processed and creates a problem if it exceeds the set threshold value.

Queues Active

Monitors which queues are active, and reports the number of jobs that are currently held in those queues.

Reboot Notification

Notifies when a server has been rebooted.

Receive Buffers

Reports on excessive receive buffers.

Receive Buffers Minimum

Checks that the current number of receive buffer does not exceed the minimum receive buffer setting.

Record Locks

Reports on low record lock entry space.

Server Activity Load

Reports high activity on NetWare servers.

Server Reachable

Checks for errors encountered when gathering the statistics from the server.

User Resource Usage

Monitors the resources used on a per user basis and creates a problem event if it exceeds a threshold level.

Volume Directory

Monitors low directory space on writeable NetWare Volumes.

Volume Storage

Reports low free space on writeable NetWare Volumes.
