

Sensor List

RAS High Connection Rate

Checks for a high rate of successful Remote Access Services connections.

RAS Performance Checks

Checks some basic performance indicators.

RAS Port Byte Rate

Checks the activity in bytes received/sent per second against a maximum threshold for each port on the RAS device.

RAS Port Errors

Checks for errors that may occur during a connection for each port on the RAS device.

RAS Port Frame Rate

Checks the activity in frames received/sent per second against a maximum threshold for each port on the RAS device.

RAS Process Resources

Reports if any of the RAS processes are using significant resources.

RAS Service Not Running

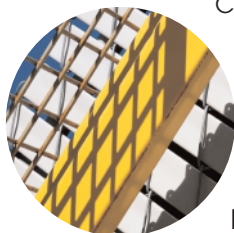

Checks for RAS services that are auto-started, but are not running.

RAS Too Many Error Events

Checks for a high number of Windows NT system, application, and security error messages for Remote Access Server.

RAS Too Many Failed Connections

Checks for a high number of Remote Access Server connections that failed to authenticate and were then disconnected.
